

TROPICAL CYCLONE BULLETIN NR. 8
Typhoon HANNA (HAIKUI)

Issued at 5:00 PM, 01 September 2023

Valid for broadcast until the next bulletin at 11:00 PM today.

“HANNA” MAINTAINS ITS STRENGTH AS IT DECELERATES WESTWARD

Location of Center (4:00 PM)
The center of the eye of Typhoon HANNA was estimated based on all available data at 710 km East Northeast of Itbayat, Batanes (22.2°N, 128.5°E)
Intensity
Maximum sustained winds of 120 km/h near the center, gustiness of up to 150 km/h , and central pressure of 975 hPa
Present Movement
Westward at 15 km/h
Extent of Tropical Cyclone Winds
Strong to typhoon-force winds extend outwards up to 340 km from the center

TRACK AND INTENSITY FORECAST

Date and Time	Center Position			Intensity		Movement dir. and speed (km/h)
	Lat. (°N)	Lon. (°E)	Location	MSW (km/h)	Cat.	
12-Hour Forecast 2:00 AM 02 September 2023	22.5	126.8	550 km East Northeast of Itbayat, Batanes	130	TY	WNW 15
24-Hour Forecast 2:00 PM 02 September 2023	23.2	125.0	425 km Northeast of Itbayat, Batanes	130	TY	WNW 15
36-Hour Forecast 2:00 AM 03 September 2023	23.8	122.8	350 km North Northeast of Itbayat, Batanes	140	TY	WNW 20
48-Hour Forecast 2:00 PM 03 September 2023	24.3	120.7	410 km North Northwest of Itbayat, Batanes or in the vicinity of Taichung City, Taiwan	120	TY	WNW 20
60-Hour Forecast 2:00 AM 04 September 2023	24.5	119.1	500 km North Northwest of Itbayat, Batanes (OUTSIDE PAR)	120	TY	W 15
72-Hour Forecast 2:00 PM 04 September 2023	24.6	118.1	570 km Northwest of Itbayat, Batanes or in the vicinity of Fujian, China (OUTSIDE PAR)	120	TY	W 10

TROPICAL CYCLONE BULLETIN NR. 8
Typhoon HANNA (HAIKUI)

Issued at 5:00 PM, 01 September 2023

Valid for broadcast until the next bulletin at 11:00 PM today.

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT

No Wind Signal hoisted at this time.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

HANNA is less likely to directly bring heavy rainfall over the country throughout the forecast period. However, the Southwest Monsoon currently enhanced by HANNA, Typhoon SAOLA (GORING), and Severe Tropical Storm KIROGI will bring occasional to monsoon rains over the western portion of Luzon in the next three days. For more information, refer to **Weather Advisory #16 for Southwest Monsoon** issued at 11:00 AM today and **24-Hour Public Weather Forecast and Outlook** at 4:00 PM today.

Forecast rainfall are generally higher in elevated or mountainous areas. Under these conditions, **flooding and rain-induced landslides are expected** especially in areas that are highly or very highly susceptible to these hazards as identified in hazard maps and in localities that experienced considerable amounts of rainfall for the past several days.

Severe Winds

HANNA is less likely to directly bring severe winds over the country throughout the forecast period. However, the **enhanced Southwest Monsoon** will continue to bring **gusty conditions** over the following areas not under any Wind Signal, especially in coastal and upland/mountainous areas exposed to winds:

- **Today:** Batanes, Ilocos Region, Cordillera Administrative Region, Zambales, Bataan, Aurora, Bulacan, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, Western Visayas, and the northern portion of Eastern Visayas.
- **Tomorrow:** Batanes, Ilocos Region, Abra, Benguet, Zambales, Bataan, Bulacan, Aurora, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, Western Visayas, and the northern portion of Eastern Visayas.
- **Sunday:** Batanes, Ilocos Norte, Ilocos Sur, Zambales, Bataan, Bulacan, Aurora, Metro Manila, CALABARZON, MIMAROPA, Bicol Region, and Western Visayas.

HAZARDS AFFECTING COASTAL WATERS

HANNA is less likely to bring rough sea conditions over any seaboard of the country through the forecast period. However, due to the Southwest Monsoon that it is slightly enhancing, a **Gale Warning is in effect** for most seaboards of Luzon and Western Visayas, and the seaboard of Northern Samar. Disruption in civilian maritime activities is expected over these areas (e.g., suspension of sea travel) due to hazardous sea condition. For more information, refer to **Gale Warning #20** issued at 5:00 PM today.

TRACK AND INTENSITY OUTLOOK

- HANNA is forecast to move generally west northwestward throughout the forecast period. On the track forecast, the tropical cyclone is forecast to pass close or make landfall in the vicinity of Yaeyama Islands in the Ryukyu archipelago between tomorrow evening and Sunday morning, then make landfall on Sunday morning and traverse over Taiwan. HANNA is forecast to exit the Philippine Area of Responsibility on Sunday afternoon or evening.
- Outside the PAR, the tropical cyclone will turn more westward as it passes over the Taiwan Strait before making another landfall over mainland China on Monday morning or afternoon.
- HANNA is forecast to reach its peak intensity on Sunday morning prior to its landfall over Taiwan. Rapid weakening will then ensue following its landfall over mainland China on Monday.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 11:00 PM today.
